

Advance DevOps Lab - Practical 1

Varun Gupta - D15 B - Roll no. 20

Aim : To understand the benefits of Cloud Infrastructure and Setup AWS Cloud9 IDE, Launch AWS Cloud9 IDE and Perform Collaboration Demonstration.

Theory :

AWS Cloud9 is a cloud-based integrated development environment (IDE) that lets you write, run, and debug your code with just a browser. It includes a code editor, debugger, and terminal. Cloud9 comes prepackaged with essential tools for popular programming languages, including JavaScript, Python, PHP, and more, so you don't need to install files or configure your development machine to start new projects. Since your Cloud9 IDE is cloud-based, you can work on your projects from your office, home, or anywhere using an internet-connected machine. Cloud9 also provides a seamless experience for developing serverless applications enabling you to easily define resources, debug, and switch between local and remote execution of serverless applications. With Cloud9, you can quickly share your development environment with your team, enabling you to pair programs and track each other's inputs in real time.

Benefits :

1) CODE WITH JUST A BROWSER -

AWS Cloud9 gives you the flexibility to run your development environment on a managed Amazon EC2 instance or any existing Linux server that supports SSH. This means that you can write, run, and debug applications with just a browser, without needing to install or maintain a local IDE. The Cloud9 code editor and integrated debugger include helpful, time-saving features such as code hinting, code completion, and step-through debugging. The Cloud9 terminal provides a browser-based shell experience enabling you to install additional software, do a git push, or enter commands.

2) CODE TOGETHER IN REAL TIME -

AWS Cloud9 makes collaborating on code easy. You can share your development environment with your team in just a few clicks and pair programs together. While collaborating, your team members can see each other in real time, and instantly chat with one another from within the IDE.

3) BUILD SERVERLESS APPLICATIONS WITH EASE -

AWS Cloud9 makes it easy to write, run, and debug serverless applications. It preconfigures the development environment with all the SDKs, libraries, and plug-ins needed for serverless development. Cloud9 also provides an environment for locally testing and debugging AWS Lambda functions. This allows you to iterate on your code directly, saving you time and improving the quality of your code.

4) DIRECT TERMINAL ACCESS TO AWS -

AWS Cloud9 comes with a terminal that includes sudo privileges to the managed Amazon EC2 instance that is hosting your development environment and a preauthenticated AWS Command Line Interface. This makes it easy for you to quickly run commands and directly access AWS services.

5) START NEW PROJECTS QUICKLY -

AWS Cloud9 makes it easy for you to start new projects. Cloud9's development environment comes prepackaged with tooling for over 40 programming languages, including Node.js, JavaScript, Python, PHP, Ruby, Go, and C++. This enables you to start writing code for popular application stacks within minutes by eliminating the need to install or configure files, SDKs, and plug-ins for your development machine. Because Cloud9 is cloud-based, you can easily maintain multiple development environments to isolate your project's resources.

Steps:

1. Login with your AWS account.
2. Navigate to Cloud 9 service from Developer tools section
3. Click on Create Environment :

The screenshot shows the AWS Cloud9 console's 'Create environment' page. The breadcrumb navigation is 'AWS Cloud9 > Environments > Create environment'. The page title is 'Create environment' with an 'Info' link. The 'Details' section contains the following fields:

- Name:** A text input field containing 'RandomWarewolf'. Below it, a note states: 'Limit of 60 characters, alphanumeric, and unique per user.'
- Description - optional:** A text input field. Below it, a note states: 'Limit 200 characters.'
- Environment type:** A section with the subtext 'Determines what the Cloud9 IDE will run on.' It contains two radio button options:
 - New EC2 instance:** Selected by default. The description below it says: 'Cloud9 creates an EC2 instance in your account. The configuration of your EC2 instance cannot be changed by Cloud9 after creation.'
 - Existing compute:** Unselected. The description below it says: 'You have an existing instance or server that you'd like to use.'

The footer of the console shows 'CloudShell', 'Feedback', and copyright information for Amazon Web Services, Inc. or its affiliates, along with links for 'Privacy', 'Terms', and 'Cookie preferences'.

4. Provide the name for the Environment (WebAppIDE) and click on next.

Network settings [Info](#)

Connection
How your environment is accessed.

☐ AWS Systems Manager (SSM)
Accesses environment via SSM without opening inbound ports (no ingress).

☒ Secure Shell (SSH)
Accesses environment directly via SSH, opens inbound ports.

▼ VPC settings [Info](#)

Amazon Virtual Private Cloud (VPC)
The VPC that your environment will access. To allow the AWS Cloud9 environment to connect to its EC2 instance, attach an internet gateway (IGW) to your VPC. [Create new VPC](#)

Name -

Subnet
Used to setup your VPC configuration. To use a private subnet, select AWS Systems Manager (SSM) as the connection type. [Create new subnet](#)

Uses default subnet in any Availability Zone

5. Keep all the Default settings as shown in below:

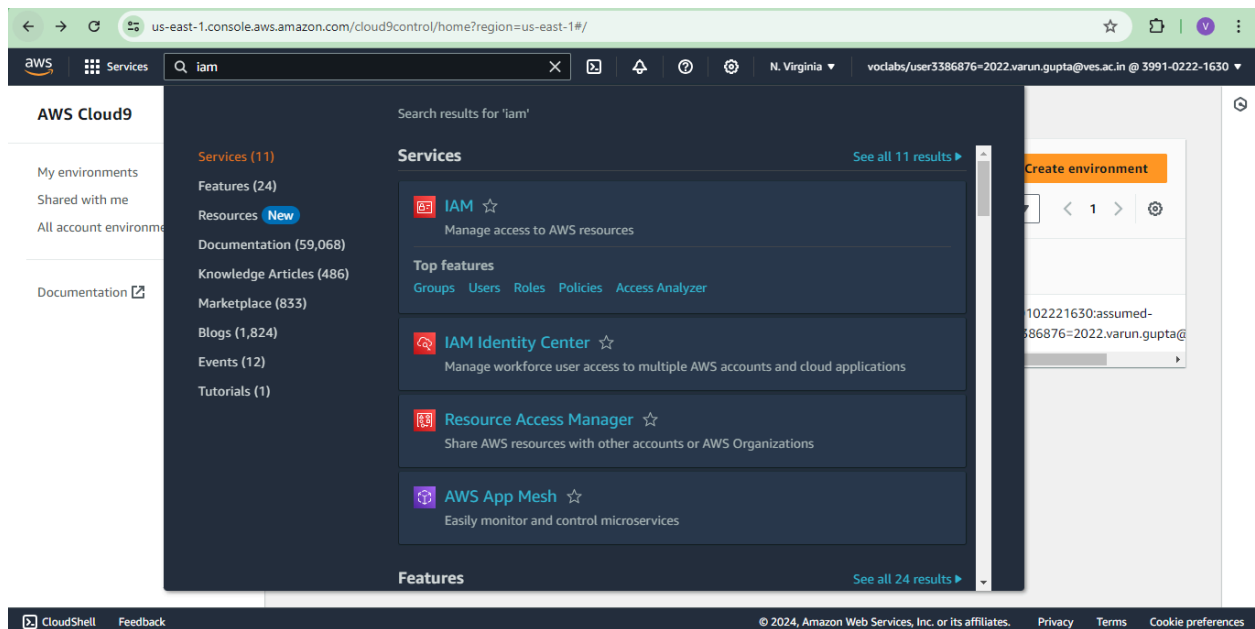

6. Review the Environment name and Settings and click on Create Environment:

The screenshot shows the AWS Cloud9 console in the 'us-east-1' region. A notification banner at the top states 'Creating RandomWarewolf. This can take several minutes. While you wait, see [Best practices for using AWS Cloud9](#)'. The left sidebar shows 'My environments', 'Shared with me', 'All account environments', and 'Documentation'. The main content area is titled 'AWS Cloud9 > Environments' and shows 'Environments (1)'. A table lists the environment:

	Name	Cloud9 IDE	Environment type	Connection	Permission	Owner ARN
<input type="radio"/>	RandomWarewolf	Open	EC2 instance	Secure Shell (SSH)	Owner	arn:aws:sts::399102221630:assumed-role/voclabs/user3386876=2022.varun.gupta@

It will take a few minutes to create an aws instance for your Cloud 9 Environment.

7. Till that time open IAM Identity and Access Management in order to Add user In another tab.

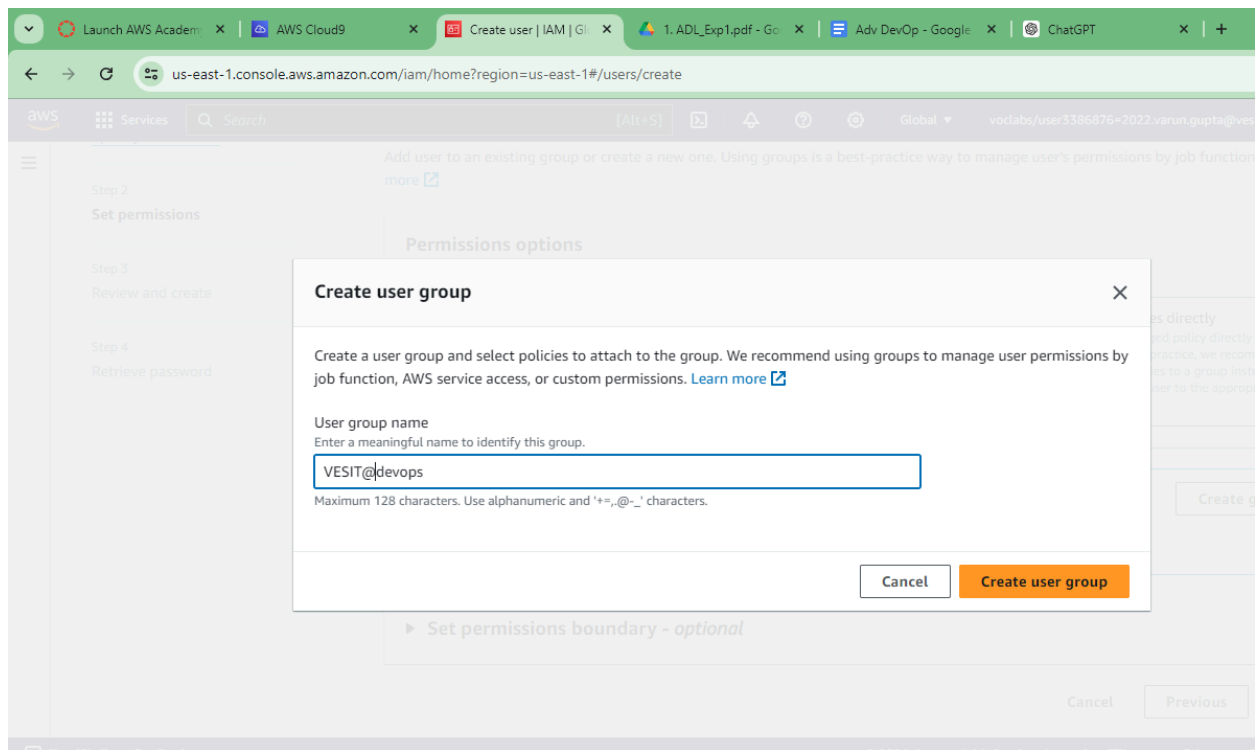

8. Add the user provided manual password if you want and click on Next permission tab.

9. Click on Create group

10. Provide group name and click on create group.

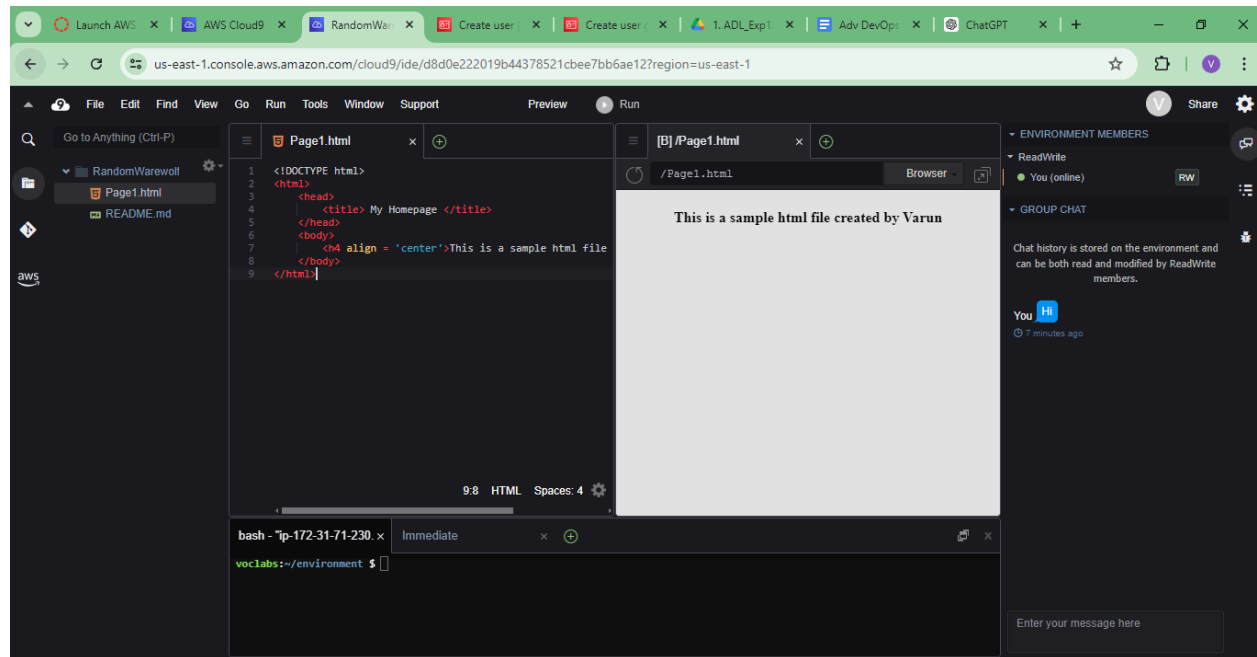

11. Now we move towards our cloud9 IDE Environment tab it shows as shown :

12. If you check at the bottom side Cloud9 IDE also gives you and aws CLI for command operations: as we here checked the git version, IAM user details and so on...

13. Now we will set up a collaborative environment Click on File you can create a new file or choose from template, here m opting html file to collaborate.

14. Edit html file and save it

15. Click on Open IDE you will same interface as your other member have to collaborate in real time, also you all within team can do group chats as shown below:

Conclusion:

Thus we got to learn how to set up cloud 9 IDE and add users to collaborate.
